## Â Lateral Sinus Lift, CMI Implant PlacementÂ

1. Initial clamping force is excellent during immediate placement as a strong streamlined thread exists to the end of the apex and advantageous for bicortical fixation of Schneiderian2. Initial clamping force is excellent through the magic thread design3. Advantageous for immediate loading or early loading4. Assures biological width and minimizes bone loss through perfect conical sealing5. Excellent aesthetics as it is located on the dental correction6. Surgical operation depth can be freely adjusted7. Convenient in connecting abutment8. RBM(Ra 1.2 ~ 1.6) surface that has been verified for its long-term safety
